#### **DETAILED ACTION**

#### Election/Restrictions

1. Applicant's election without traverse of claims 1-18 and 22-40 in the reply filed on June 22, 2005 is acknowledged.

### **Double Patenting**

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Art Unit: 2855

Claims 1-18 and 22-40 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-17 of U.S. Patent No. 6,675,660). Although the conflicting claims are not identical, they are not patentably distinct from each other because both the patent and the instant application teaches a device for measuring the flow rate of a fluid in a flow channel comprising a means for creating localized compositional variation; measuring the flight time; and spaced-apart electrodes disposed along fluid flow axis in the flow channel and applying a voltage pulse to the electrodes. The instant application does not explicitly teach the spacing of the electrodes. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have provided the particular spacing of the electrodes, since it has been held that rearranging parts of an invention involves only routine skill in the art. In re Japikse, 86 USPQ 70. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have provided the particular spacing of the electrodes as taught by the instant invention for the purpose of uniform means of applying voltage so that there is a more accurate measurement of the flow.
